When it came to straightening my teeth, the choice was clear:
Invisalign.

Invisalign gave me the **confidence to smile again.**

I'd developed a complex about my teeth. My front teeth stuck out and my jaw was too small, which meant that I hated smiling. I looked into treatment options and decided Invisalign was the right choice for me. Because they're nearly invisible, I was able to carry on living my life without being self-conscious, most people didn't even know I was wearing them.

From start to finish, my treatment took 18 months. I wore the aligners every day, and just removed them to eat and drink. That's the beauty of Invisalign, they fit into your life. Thanks to the treatment I now feel so much more confident. Put simply, I got my smile back.

Please read on to discover if Invisalign can help you too.

The treatment that's given **over 3 million people worldwide** a reason to smile.

Invisalign's portfolio of innovative treatments fixes a large range of teeth straightening issues: from overcrowded teeth, widely spaced teeth, crossbites to overbites and underbites.

Invisalign® Full

Our foundation treatment option. Straightens teeth with a series of removable, virtually invisible aligners.

Invisalign® Lite

For less complex cases such as minor crowding and spacing issues.

Invisalign® Teen

All the features of Invisalign Full, but with additional features such as wear indicators that meet the needs of younger patients.

Invisalign® i7

An easy and convenient solution, designed specifically for minor tooth movement. Invisalign i7 works in as little as three months.

Vivera® Retainers

A series of three clear retainers used to maintain your confident new smile. Available to both Invisalign and non-Invisalign patients.

Invisalign. Always innovating.

Invisalign is committed to constantly developing the treatment it offers people. This has resulted in a number of groundbreaking innovations for teeth straightening with clear aligners.

SmartTrack®

A flexible aligner material that offers improved control of tooth movements and greater comfort.

ClinCheck®

A virtual 3D treatment plan that shows the series of movements your teeth are projected to go through over the course of the treatment.

Comfortable, clear and removable.

Invisalign can straighten teeth using a series of nearly invisible aligners that are custom-made to your teeth for comfort. As you replace each aligner every two weeks, your teeth will move gradually towards the final projected position as prescribed by your Invisalign Provider.

Unlike fixed braces, you can remove the aligners and put them back in again at any time – so you end up with the straight new smile that transforms your life.
